

2_30 WEDGE ONLY TEMPLATE

Question:

I have several existing projects, divided and undivided facilities, and trying to estimate the pavement wedging quantities. NCWedge crashes more often than not and some of my horizontal alignments are complex in nature. Is there something in Corridor Modeling that can be used to compute pavement wedging quantities?

Answer:

As an alternative to NCWedge, a wedge only template has been created in our NCDOT_RDY_Standard.ITAL (Master Template Library).

This template can be used for both divided and undivided facilities. For further details on the wedge only template, see the below web reference help link. This link is also accessible through the template help link in the template library.

Wedge Help

For further instructions on how to use the wedge only template, see the below link for a complete list of all of the exercises with downloadable datasets so you can run through them at your convenience. This particular exercise is linked under M2 - Pavement Wedge Only Quantities under the Miscellaneous Exercises heading.
